SUMMARY

Generative AI Engineer with 3.7+ years of experience building production-grade AI systems for enterprise clients, spanning Agentic AI workflows, RAG pipelines with hybrid retrieval, and LLM-powered automation at scale. Databricks Certified Generative AI Engineer Associate and Claude Certified Developer – Foundations. Hands-on expertise across Unity Catalog, Delta Lake, Genie, Mosaic AI Vector Search, MLflow, Text-to-SQL systems, and LLM evaluation (LLM-as-a-Judge, automated evals). Proficient in Python, LangChain/LangGraph, FastAPI, and cloud-native architectures. Proven track record of reducing manual processing time by 70% and delivering multilingual, multi-agent solutions in regulated environments.

TECHNICAL SKILLS

Languages: Python, Kotlin, Java
AI/ML/GenAI: LangChain, LangGraph, RAG (Traditional, Hybrid & Graph RAG), Agentic AI, Prompt Engineering, LLMs (GPT-4, Claude), SLM Fine-Tuning, Azure OpenAI, Vector Databases (ChromaDB, Pinecone, Elasticsearch, Mosaic AI Vector Search), Semantic Search, TensorFlow, PyTorch, Sentence-Transformers
Evaluation & Optimization: LLM-as-a-Judge, Automated Evals, Semantic Caching, Prompt Caching, Text-to-SQL
Databricks Lakehouse: Genie (NL-to-SQL), Unity Catalog, Delta Lake / Delta Tables, Databricks Apps, Mosaic AI Vector Search, MLflow, Databricks Workflows
Cloud & Infra: AWS (S3, Lambda, EC2), Docker, CI/CD, Microservices Architecture
Frameworks & Tools: FastAPI, LiteLLM, REST APIs, Git, JIRA, Postman
Mobile: Android SDK, Jetpack Compose, Health Connect, MVVM

PROFESSIONAL EXPERIENCE

Analytics Consultant **July 2026 – Present**
Quantzig AI Solutions *Bangalore, India*

- Built two production conversational analytics bots on the Databricks Lakehouse: a Text-to-SQL bot for static structured datasets and a hybrid SQL + RAG bot for daily-refreshed data, both surfaced through Genie for NL querying over Unity Catalog-governed Delta Tables.
- Architected an automated, event-driven ingestion pipeline for the SQL + RAG bot that monitors source Delta Tables for updates and auto-triggers chunking/embedding jobs, keeping the vector store fresh with zero manual intervention.
- Implemented semantic caching on the SQL + RAG bot to reduce redundant LLM calls and cut response latency/cost on repeated query patterns.
- Built an LLM-as-a-Judge evaluation framework to continuously score bot response quality across accuracy, relevance, and hallucination checks, flagging borderline cases for human review.
- Earned the Databricks Certified Generative AI Engineer Associate and Claude Certified Developer – Foundations certifications; applied Unity Catalog governance, Delta Lake, Mosaic AI Vector Search, and MLflow 3 to move GenAI workloads natively onto the Lakehouse.
- Collaborating on applied POCs benchmarking Graph RAG vs. Traditional RAG for multi-hop Q&A, fine-tuning SLMs for query intent analysis, and evaluating Databricks Apps for native GenAI deployment.

SDE-1 **Feb 2023 – July 2026**
Deloitte Digital *Gurugram, India*

- Delivered 6+ production GenAI solutions using LangChain/LangGraph + LLMs, automating healthcare workflows for 10K+ documents/month and reducing processing time by 70%.
- Built enterprise RAG systems with hybrid retrieval, achieving 92%+ retrieval accuracy on clinical documents with real-time response performance (sub-2-second latency).
- Developed a multilingual, multi-drug chatbot POC with controlled flow (greeting, drug information, out-of-context redirection) using RAG + Elasticsearch vector search.
- Owned Avatar Creation prompt engineering, writing and iterating prompts to improve persona consistency, instruction following, and response quality.
- Engineered FastAPI backend services supporting 1M+ API requests/month (API design, async performance tuning, resilient error handling), and built multimodal GenAI tooling (document extraction, app review analysis, UX insights) that reduced manual effort by 500+ hours/quarter and accelerated product iteration by 40%.

KEY PROJECTS & INNOVATIONS

CaseSense AI – Intelligent Salesforce Case Management *Python, LangGraph, LiteLLM, FastAPI*

- Architected multi-agent system with 3 specialized agents using LangGraph, automating end-to-end customer support workflows.
- Built self-learning knowledge base with semantic search (384-dim embeddings) achieving top-3 retrieval accuracy, and integrated a LiteLLM gateway for a unified interface across OpenAI and Anthropic providers.

- Developed an intelligent routing agent with 85%+ accuracy for auto-resolution vs. escalation, and implemented an MCP server enabling Claude Desktop integration for Salesforce.

Multilingual Multi-Drug Chatbot *Python, LangChain, Elasticsearch, RAG*

- Built a multilingual, multi-drug chatbot POC with controlled conversational flow (greeting, drug information retrieval, out-of-context redirection) using RAG + Elasticsearch vector search.
- Designed hybrid retrieval and language-detection logic to serve accurate drug information across multiple languages with consistent persona and safety guardrails.

EDUCATION

Master of Computer Applications (MCA) **Oct 2022 – Oct 2024**
Chandigarh University (Distance Learning)

Bachelor of Computer Applications (BCA) **Jul 2019 – Oct 2022**
Prof. Rajendra Singh (Rajju Bhaiya) University, Allahabad State University

CERTIFICATIONS & ACHIEVEMENTS

- Databricks Certified Generative AI Engineer Associate – Databricks (2026)
- Claude Certified Developer – Foundations – Anthropic (2026)
- AI Agents using LangChain – DeepLearning.AI (2024) — Certificate ID: 8109852001
- Academy Accreditation – Generative AI Fundamentals – Databricks (2024)
- Salesforce Certified Platform Developer I & Associate – Salesforce (2023)
- Deloitte Applause Award – 2x Recipient (2023, 2024) – INR 20,000 for GenAI innovation
